

CAREER OBJECTIVE

Detail-oriented B.Tech IT undergraduate with a proficient foundation in Data Science, Data Analytics, Python, SQL, Machine Learning, and Data Visualization. Passionate about solving real-world problems through analytical thinking, structured problem-solving, and data-driven approaches. Skilled in building predictive models, analyzing datasets, and presenting meaningful insights through dashboards and reports. Eager to contribute technical expertise, continuously learn emerging technologies, and grow in a challenging and professional environment focused on innovation and data-driven decision-making.

EDUCATION

Charutar Vidya Mandal University (CVMU)
B-Tech in Information Technology SGPA : 8.50

Gujarat, India
2023–2027

TECHNICAL & ANALYTICAL SKILLS

Programming & Tools: Python, SQL, Jupyter Notebook, Google Colab
Data Analysis & Visualization: Exploratory Data Analysis (EDA), Data Cleaning, Feature Engineering, Matplotlib, Seaborn, Power BI
Statistics & Mathematics: Probability, Statistics, Hypothesis Testing
Machine Learning: Supervised & Unsupervised Learning, Regression, Classification, Clustering, Model Evaluation, Cross-Validation
Documentation & Reporting: Dashboard Creation, Project Summaries, Visual Infographics
Soft Skills: Rapport Building, Excellent Communication, Data Communication, Research Thinking, Stakeholder Engagement, Time Management, QA/QC mindset

PROJECTS

ServeEase – AI-Based Home Service Booking Platform

January 2026 - Present

- Built a web-based platform using Python (Flask) to book services like electricians, plumbers, and carpenters, with an ML component to analyze user descriptions, predict job complexity, and estimate service cost and time.
- Developed a system to match users with suitable service providers based on predicted requirements and implemented sentiment analysis to evaluate customer feedback.
- Conducted model evaluation, algorithm comparison, and business data analysis using Jupyter notebooks to extract insights and improve system performance

Amazon Web Scraper Project

January 2026

- Developed a Python-based web scraper to extract product details from Amazon’s search results for “PlayStation 5.” The scraper collects information such as title, price, ratings, reviews, and availability to automate data collection from an e-commerce platform.
- Used Python libraries like Requests and BeautifulSoup to fetch and parse HTML content. Extracted data is cleaned, structured, and stored in a CSV file for easy access and further analysis.
- The project reduces manual effort by automating product data collection and enables quick comparison of information. It demonstrates practical skills in web scraping, data processing, and automation using Python.

Predictive Analysis on Genomic Data for Treatment Response Prediction

May 2025

- Built a web-based application to analyze genomic SNP data and predict disease risk by processing user-uploaded data and comparing it with multiple genomic databases
- Developed a system to classify risk levels (Low / Medium / High) and generate basic personalized nutrition and exercise recommendations based on analysis
- Implemented secure user authentication and added a chatbot to help users understand their results and interact with the system

Positions of Responsibility

Team Leader - HACKX 2025

Sep 2025

Team Leader - Ideathon

Oct 2025

Sports Coordinator of MBIT College

Dec 2024

Team Captain of Kabaddi

Jan 2026

Represented Gujarat State at Nationals in Kabaddi

Feb 2023

CERTIFICATES

Complete Microsoft SQL Server Database Design Masterclass

May 2025

Machine Learning with Python – IBM Developer Skills Network

Sep 2025

Introduction to Snowflake SQL

Oct 2024
